

EGIS BY SEC-ENG

Wide Area Duress Solution

The EGIS solution is a robust and easy to use personal alarm designed for employees who work alone.

The unit provides an effective way to raise an alert in a dangerous situation or personal threat. The user can raise an alarm manually by pressing the button, as well as a man-down function. The man-down function is a built-in switch that detects when the user is lying horizontal or not moving and raises an alarm automatically.

Dependent on the type of alarm raised the device can react initiating a number of communications such as Voice, SMS, GPS location & 3G Tracking. All data is time and date stamped for post-incident reporting.

EGIS is fully customisable to meet organisations and individual requirements.
