Product:	DURApage
	Real time message delivery from web browser
	Customisable user interface
	Personal and common call groups and predefined messages

DURApage – DESKTOP PAGING AND MESSAGING

DURApage enables LAN/WAN connected users with a web browser to dispatch messages to a multitude of devices (e.g. DECT and WiFi phones, pagers and mobile phones). DURApage supports the ability to send “free-text” and “pre-defined” messages to individual recipients or groups of recipients. Special one-touch emergency buttons enable simple and consistent delivery of alarm messages reducing the potential for human error during emergency / crisis situations (e.g. Code calling in hospitals, evacuation procedures etc.) All messages are date/time stamped and logged.

Features:

- Real time message delivery
- Customisable user interfaces
- Customisable emergency buttons
- Ability to display company logo
- Message delivery tracking
- Logging of user IP addresses
- Logging of all message and acknowledgements
- Message text counter
