

ENSURElog

Integrated logging system

ENSURElog is a fully integrated logging system that logs all DURAsuite and ENSUREsuite events.

Overview

The ability to readily access information on life or mission critical events, for management or forensic reporting, is all but mandatory today in order to achieve and maintain accreditation levels. With this in mind ENSURElog provides a secure and controlled information logging environment.

ENSURElog operates on a highly reliable appliance which is ideal for storing life critical security systems event data.

All events within DURAsuite are date and time stamped and logged in ENSURElog's database. These events include all messages sent and received, accept/reject responses, duress alarms managed, tasks requested and allocated, calls made and received, and system activity.

Users with the requisite IT permissions and a unique username/password can access ENSURElog to view the logs in a web browser interface or to export data for processing by other applications such as spreadsheets or reporting packages.

ENSURElog's data is divided into logical tabs (i.e. messaging, alarm, tasks etc.) to make the analysis of the information easier. Via the web browser, users can manipulate the view of the data within the tabs using filters.

Integrated Wireless

Locked Bag 50,
Strawberry Fields
NSW 2012

Specifications

Appliance

- CPU:
 - Intel Ultra Low Voltage Celeron (1.0 Ghz)
 - Intel Pentium M Low Voltage (1.4Ghz)
- Ethernet:
 - Intel 82551QM 10/100Base-T controller
- Display Interface:
 - CRT Interface
 - 36-bit LVDS interface
 - DVI interface
- Keyboard/Mouse:
 - Supports PS/2 Mouse and Keyboard
- Dimensions:
 - W: 264.5 x H: 69.2 x D:137.25mm
 - Weight: 2Kg
- Power:
 - Consumption: 36W (max)
 - Voltage: 12 VDC - 24 VDC

Software

Operating system:

- Ubuntu

Internet browser:

- Mozilla Firefox
- Microsoft IE
