	Intuitive use
	Contemporary design

## ASCOM teleCARE PATIENT HANDSETS – SUPERIOR SERVICE AND FUNCTIONALITY FOR CURE AND CARE ENVIRONMENTS

Wherever Ascom teleCARE patient handsets are installed, improved patient comfort, safety and peace of mind are always within reach.

Ascom teleCARE patient handsets are renowned for their ease of use and robustness. For 2012, they receive significant design and functionality improvements.

The new product line features four ergonomic handsets that offer patients an extensive range of features and capabilities, including: alarm and service calls, bed and room lighting, integrated flashlight, window shade/radio/TV controls, headset connection and nurse call speech.

### Functionality and design

All handsets feature color-coded and clearly marked buttons, with international symbols that identify their functionality.

The dominant feature on all handsets is the Call Button – a large, red button with a nurse symbol. Like other functions on the handset, the call button is permanently backlit to help patients locate it in the dark. When pressed, the light brightens to reassure patients that calls have been registered.

### Durable quality

All handsets are lightweight, compact, waterproof and can be dip-sterilized. The Safe Release plug, which connects each handset to the switch module, automatically releases if excessive strain is applied to the handset cable.

### RFID tag - an industry first!

To meet the demands of an ever-increasing inventory of products in a healthcare environment, Ascom teleCARE patient handsets now feature an integrated RFID tag. This tag can be used to simplify handset inventorying and sterilization routines.
